

The *Journal of Universal Science Online* (J. Univ. Sci.) is a peer-reviewed journal.

## Open access

This journal offers authors a choice in publishing their research:

- No open access publication fee
- Articles are freely available to the internet without permission

## GUIDE FOR AUTHORS

### Manuscript Preparation

#### *General Information*

You may submit a single pdf or .doc for review, but the production office requires the main document, images, and tables be in separate files at the point of acceptance. Follow the instructions below to submit the required files. Information on the length and style of the manuscript should be in accordance with the kind of manuscript described in Article Types.

SI units are preferred. The nomenclature sponsored by the International Union of Pure and Applied Chemistry (IUPAC) is requested for chemical compounds. Chemical bonds should be correctly placed and double bonds clearly indicated. Indicate valence by superscript plus and minus signs. Authors of papers presenting ab initio electronic structure calculations or force-field calculations should follow the respective IUPAC guidelines (see J. Comput. Chem. 20, 1587-1590 and 1591-1592).

#### Microsoft Word Documents

For manuscripts created in a word-processing program (e.g., MS Word), a separate text-only .doc, .docx, or .rtf file should be uploaded for the entire manuscript. Tables should be uploaded separately as a .doc or .rtf file. Figures should be uploaded separately as .tif, .eps, or .doc files. For vector images, one .doc file is sufficient with properly labeled figures, but .tif and .eps files should be submitted separately. Other figure file types are not suitable for production purposes. All figures and tables should be numbered and cited sequentially in the manuscript. All captions should be included separately at the end of the manuscript.

To avoid unnecessary errors you are strongly advised to use the 'spell-check' and 'grammar-check' functions of your word processor.

## *Special Information*

### **Title of Manuscript**

Concise and informative. Avoid abbreviations and formulae where possible.

**Author ONE<sup>1</sup>, Author TWO<sup>2</sup>, and Author THREE<sup>3\*</sup>** (please provide full names of all authors, and first name (first letter uppercase) family name (all uppercase))

<sup>1</sup> Author ONE

Author Affiliation, Full Address, Country, Postal Code

<sup>1</sup> Author TWO

Author Affiliation, Full Address, Country, Postal Code

<sup>1</sup> Author THREE

Author Affiliation, Full Address, Country, Postal Code

\*Corresponding Author: name and e-mail address

Keywords: (please insert up to five keywords, but max. 1 line)

Abbreviations: If necessary

### **ABSTRACT**

Abstract text, max. 150 words, present tense, no personal pronouns. A concise and factual abstract is required. The abstract should state briefly the purpose of the research, the principal results and major conclusions. An abstract is often presented separately from the article, so it must be able to stand alone. For this reason, References and non-standard or uncommon abbreviations should be avoided.

### **Introduction**

State the objectives of the work and provide an adequate background, avoiding a detailed literature Survey.

### **Materials and methods**

Provide sufficient detail to allow the work to be reproduced. Methods already published should be indicated by a reference: only relevant modifications should be described.

### **Results and discussions**

Results should be clear and concise. This should explore the significance of the results of the work, not repeat them. A combined Results and Discussion section is often appropriate. Avoid extensive citations and discussion of published literature.

### **Conclusions**

The main conclusions of the study may be presented in a short Conclusions section, which may stand alone or form a subsection of a Discussion or Results and Discussion section.

### **Acknowledgements**

(Insert any financial or other scientific contributions.)

### **References**

*It is necessary to signal it in all of the references the DOI link!!*

#### Citations in Articles:

##### *Equation*

Equations should be numbered and inserted using Equation Editor, not as graphics, and should be set in the main text, for example: However, equation (1) is not .....

##### *References*

..... earlier studies, e.g. [2,3] where smaller ..... (see type of references examples)

##### *Figures*

Ensure that each illustration has a caption. A caption should comprise a brief title (not on the figure itself) and a description of the illustration. Keep text in the illustrations themselves to a minimum but explain all symbols and abbreviations used. Number figures consecutively in accordance with their appearance in the text and place any figure notes below the table body.

##### *Tables*

Please submit tables as editable text and not as images. Tables can be placed either next to the relevant text in the article, or on separate page(s) at the end. Number tables consecutively in accordance with their appearance in the text and place any table notes below the table body. Be sparing in the use of tables and ensure that the data presented in them do not duplicate results described elsewhere in the article.

## **Graphics Preparation**

All authors may submit color figures, schemes, and charts. All digital art, including figures, schemes, and charts, should be saved as .tif, .eps, or .doc files. Submission of Excel and PowerPoint files for digital images will result in unsubmission of the article. Images should be flattened prior to submission, i.e., files should not contain layers. For vector images, one .doc file is sufficient with properly labeled figures, but .tif and .eps files should be submitted separately.

## **Image resolution**

All line art should be either vector files (.doc or .eps) or, if this is not feasible, have a resolution of 1200 dpi as a .tif file. Grayscale and color figures must have a resolution of at least 300 dpi.

## **Image sizing**

Images should be created or scaled to the size intended for print; no enlargement or reduction should be necessary. Image files should be cropped to remove non-printing borders. Files should be checked carefully for any type, lines, or other elements outside the illustration that are not intended for print. Such elements should be removed before submission. Image orientation should be the same as intended for print.

## **Chemical structures**

Chemical structures and reaction schemes should be drawn with an appropriate drawing program. The most suitable settings that should be used with ChemDraw defaults. The settings of other programs should be adjusted similarly. All files must be saved as TIFF or EPS files and should not be submitted in the native application format.
